

## **Engineering Tripos Part IIB, 4I11: Advanced Fission and Fusion System, 2018-19**

### **Module Leader**

[Dr E Shwageraus](#) [1]

### **Lecturers**

Dr E Shwageraus

### **Timing and Structure**

Lent term. 16 lectures, 4 examples papers, 2 examples classes in support of coursework. Assessment: 100% coursework

### **Prerequisites**

4M16

### **Aims**

The aims of the course are to:

- provide an understanding of advanced systems, why they are being pursued, what are their advantages and their difficulties in becoming commercially viable designs.

### **Content**

Further aims:

- What are the factors that are driving the development of advanced systems?
- Overview of fast reactor development & Gen IV reactor systems, including accelerator driven sub-critical reactors;
- Introduce the principles of fusion energy physics and the current status of research;
- Explain how the principles of fusion energy are to be applied for the design of future fusion energy systems;
- Re-cycle fuel studies, including reprocessing and re-fabrication;
- Status, issues and what would be needed to bring advanced reactor systems to a commercial standard with safety and economics as good as current Generation III+ designs

#### **Fission Systems**

- Design objectives, drivers & alternatives (2I)
- Advanced Thermal systems – example high temperature gas reactor(2I)
- Fast Spectrum Reactor systems – including external Dr A Judd(4I)
- Transmutation and Advanced Fuel cycles (2I)

#### **Fusion Systems**

Introduction & Physics of fusion systems - CCFE (2I)

- Fusion reactions: cross sections and reactivity
- Magnetic and inertial approaches to fusion
- Equilibrium, transport, instabilities and power balance

Physics & Materials - CCFE (2I)

- Heating systems and current drive
- Layout of a fusion power plant
- Fusion reactor components and materials requirements

Performance Safety and Design CCFE (2I)

- Safety of a fusion
- Radiological hazards and waste products
- Fusion in the market and timescale to fusion
- Designing a fusion power plant

**Examples papers**

- Thermal reactor systems (High Temperature Gas-cooled Reactors)
- Fast Reactors
- Fusion: plasma physics and reactor engineering

**Coursework**

|  |
|--|
|  |
| <p>Coursework #1</p> <p>Group project (3-4 students) researching into a particular advanced reactor design.</p> <p>This part will be assessed by a group presentation to the rest of the class.</p> <p>The presentations will be scheduled at a convenient time outside the normal lectures schedule.</p> <p><u>Learning objective:</u></p> <ul style="list-style-type: none"><li>• Research in depth one of the advanced reactor systems</li><li>• Familiarise with a broad range of advanced systems, their strengths and weaknesses</li></ul> |
| <p>Coursework #2</p> <p>Fast reactor transient analysis using provided computer models.</p> <p>This part of coursework will be preceded by an examples class, where these models will be introduced and demonstrated.</p> <p><u>Learning objective:</u></p> <ul style="list-style-type: none"><li>• Understand fundamentals of fast reactors transient behaviour and safety</li></ul>  |
| <p>Coursework #3</p>   |

Problem set on advanced fission reactors, plasma physics and fusion technology.

Learning objective:

- Understand fundamentals of fusion power systems physics and engineering

## Booklists

Please see the [Booklist for Group I Courses](#) [2] for references for this module.

## Examination Guidelines

Please refer to [Form & conduct of the examinations](#) [3].
